EXPERIENCE

Finmo Tech Pte Ltd [*A next-generation treasury operating system*]

Bengaluru, IN

Product Manager

May 2025 – Aug 2026

- Defined billing workflows enabling partners to configure merchant-specific billing models and automatically generate transaction-based invoices with itemized charges and payment terms, eliminating approximately **500 weekly billing disputes across 100-150 active partner-merchants**.
- Mapped partner authorization and KYB delegation scenarios into conditional verification flows, cutting friction for low-risk partners while preserving compliance rigor, which improved the onboarding experience.
- Built a commission transparency flow surfacing per-merchant breakdowns of pricing plan applied, Finmo margin, partner profit-share, and FX-normalized USD payout with an exportable Excel view, eliminating **40-45 weekly support queries across 15-20 active partners**.
- Integrated WorldPay as a card-acquiring connector to enable merchants across Australia and Singapore to accept card payments with configurable payment capture methods. This increased the monthly **TPV by an additional USD 5mn**.
- Built and shipped a Finmo Payments plugin POC for Shopify and WooCommerce, taking it through both marketplace review processes to public listing and unlocking e-commerce merchants as a new ICP.
- Shipped a stopgap FX netting tool using Claude Code wired to a daily Google Sheets extract of 500-600 transaction rows, so that ops could see net positions in one place instead of filtering them manually while engineering worked through the architecture POC.
- Defined the event dictionary and drove Mixpanel SDK integration across the Finmo product, surfacing merchant behaviour across onboarding, activation, and payment flows in self-serve dashboards for product, ops, and CS.
- Owned Finmo's product documentation and merchant user guides, keeping them current with every release so support and onboarding teams worked from a single accurate source.

Code & Theory [*Technology-first creative agency catering to Fortune 500 companies globally*]

Bengaluru, IN

Product Owner

Sep 2021 – Apr 2025

- Standardized the PRD and acceptance-criteria template used across 15+ pods, establishing a shared bar for written craft and cutting spec-clarification cycles with engineering.
- Built the launch readiness checklist and go-live runbook covering QA sign-off, product review, release comms, and rollback criteria, making the **launch motion repeatable across 50+ releases**.
- Fed post-launch retro findings into the project kickoff process, catching scope and dependency gaps at kickoff instead of late in development.
- Conducted API testing during the tech feasibility phase to validate critical product requirements against backend capabilities, ensuring smoother engineering execution and early alignment before development.
- Led a usability study on the wire transfer recipient management flow, analyzed customer friction points, and translated findings into specifications for saved beneficiary profiles, pre-populated routing, and verification workflows.
- Spearheaded the Consumer Banking Mobile app redesign, with an aim to cut down customer support tickets and elevate customer experience. Initial results showed an **increase in monthly App Store rating by 34%**.

StepSetGo *[Gamified fitness application that motivates healthy behaviors among users PAN-India]*

Mumbai, IN

Associate Product Manager

Sep 2020 – Sep 2021

- Modeled and launched an incentivization-based activity-tracking feature, achieving **20% adoption after the first 15 days of launch**.
- Conducted detailed market research of popular fitness apps before kicking off StepSetGo's new initiative around outdoor activity tracking and presented the insights to the leadership.
- Built and implemented a "Recommended Friends" section in StepSetGo's social module. This helped **reduce the average time from account creation to 1st friend added from 11 days to 6 days**.
- Defined the event taxonomy and built MoEngage dashboards for adoption, engagement, and retention, giving the product team a self-serve read on feature performance.
- Cut the time from campaign definition to launch by replacing ad-hoc requests across Slack and separate docs with one brief format that captured everything needed upfront.
- Built a weekly triage process for app store reviews and support tickets that grouped complaints by theme and fed them into the product backlog.

LiveAltLife *[Healthcare solution for users with chronic conditions to manage their lifestyle better]*

Bengaluru, IN

Associate Product Manager

Jun 2019 – Sep 2020

- Launched a nutrition management system that empowered chefs to create recipes within a predefined nutrition framework. This **reduced the recipe curation cycle time by 50%**.
- Introduced a demand forecasting layer on top of structured recipe data, cutting perishable wastage and improving availability of high-use ingredients.
- Launched an automated indent generation flow that rolled ingredient quantities up from planned menus, **reducing indent preparation time by 4-5 hours across 1 central and 4 cloud kitchens**.
- Conducted discovery interviews with end users and synthesized the findings into a themed set of pain points that drove prioritization for the nutrition and meal planning experience.

SKILLS & TOOLS

User Research, Product Analytics, Low-Fidelity Wireframing, Story Mapping, API Testing, Scrum / Agile Methodologies, Claude AI, Postman, Figma, Google Analytics, MS Office Suite, CleverTap, SQL, Power BI

EDUCATION

Manipal Institute of Technology, Manipal - B.Tech, Mechanical Engineering – May 2018

Manipal, IN
